Allowable Subject Matter

1. Claims 1-21 are allowed.
2. The following is an examiner's statement of reasons for allowance: Regarding claims 1-21, the prior art of record fails to teach of a voltage measuring unit that measures a voltage value of a plurality of channels of the BBA unit in accordance with a control signal of the modem unit, converts it into a digital fifth signal, and feeds the digital fifth signal into the modem unit. The closest reference, Shin et al. (U.S. Patent No. 6,738,514), teaches of a codec, a modem, a RF interface and a BBA interface but fails to teach of a voltage measuring unit that measures a voltage value of a plurality of channels of the BBA unit in accordance with a control signal of the modem unit, converts it into a digital fifth signal, and feeds the digital fifth signal into the modem unit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Priority

3. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Republic of Korea on 10/31/2000. It is noted, however, that applicant has not filed a certified copy of the 64275/2000 application as required by 35 U.S.C. 119(b).

The application has been amended as follows: THE ABSTRACT OF THE DISCLOSURE should be replaced with the following:

ABSTRACT OF THE DISCLOSURE

A voltage offset compensating device of a CDMA (Code Division Multiple Access) communication system transmitter is provided which is capable of compensating voltage offset by measuring real voltage of channels at a CDMA communication system transmitter and compensating for a voltage offset with a feedback loop. The voltage offset compensating device of the CDMA communication system transmitter includes a codec unit, a modem unit, and a BBA (Base Band Analog) unit. The amount of voltage offset is detected by a voltage measuring unit which measures the voltage value of each channel of the BBA unit in accordance with a control signal of the modem unit, and creates a digital signal in accordance with the voltage offset which is fed back to the modem unit to effect any necessary voltage offset compensation.
